A minimal reprex following <https://stackoverflow.com/questions/56174593/how-to-add-sty-file-to-rmarkdown-pdf-output>.

## Section 1

Hello world

## Attempts and notes

- Trivial sty files work (mystyles.sty)
- Trivial tex file didn't work.
- jmlr2e.sty doesn't work wholesale, hence:
- Changing to \*.tex didn't work.
- Trying to pare back and to isolate the issue:
  - adding and to change the order of operations handling @ in marco assignment. *partial success!!*
  - uncommenting .sty file, keeping an eye out for @ in macronames.
  - and at top and bottom is back to original error... (! LaTeX Error: Missing \begin{document}.); try changing back and forth
