A minimal reprex following <https://stackoverflow.com/questions/56174593/how-to-add-sty-file-to-rmarkdown-pdf-output>.

Section title

Hello world

Attempts and notes

Primary errors:

- original error: ! LaTeX Error: Missing \begin{document}.
- alternative error: ! You can't use \spacefactor in vertical mode.

Attempt notes:

- Trivial sty files work (mystyles.sty)
- Trivial tex file didn't work.
- jmlr2e.sty doesn't work wholesale, hence:
- Changing to *.tex didn't work.
- Trying to pare back and to isolate the issue:
 - adding and to change the order of operations handling @ in marco assignment. *partial success!!*
 - uncommenting .sty file, keeping an eye out for @ in macronames.
 - and at top and bottom is back to original error... (); try changing back and forth
